

Servers and IT equipment generate large amounts of heat, and in a high-security data centre, cooling is part of the facility's safety strategy.

**The solution?**

WHY COOLING MATTERS

A Tier IV data centre in Switzerland uses multiple compact cooling units which:

-  achieve extremely high operational reliability (Tier IV)
-  save a significant amount of energy and reduce emissions

WHY COOLING MATTERS

This application shows how data centres can be cooled in a highly reliable way, while also being low-energy and low-carbon.

Why it matters?

It supports both the digital economy and the energy transition.

WHY COOLING MATTERS

This is a strong example of how sustainable cooling supports both the digital economy and climate goals.
