

A large retail network in Romania shows how integrated control of refrigeration, HVAC, and energy systems can deliver significant savings while supporting food safety and customer comfort.

**The solution?**

WHY COOLING MATTERS

Retail refrigeration and HVAC run continuously and represent a major share of a store's energy use. This application focuses on:

- Food preservation through reliable refrigeration
- Stable indoor comfort via HVAC control
- Energy efficiency across many sites
- Monitoring and reporting for compliance

WHY COOLING MATTERS

973 stores are connected to this application, and has an outcome of 14% global energy savings through integrated store control with a 5.3 EUR million annual savings observed across 576 stores.

Why it matters?

This supports both short-term efficiency and long-term decarbonisation.

WHY COOLING MATTERS

Cooling performance is both a sustainability and a public health issue.
