

An industrial production facility in Italy requires reliable cooling to manage the heat generated by continuous manufacturing processes and machinery.

**The solution?**

WHY COOLING MATTERS

The facility uses a centralised cooling system designed to:

- ▶ Manage both process cooling and indoor climate
- ▶ Adapt cooling output to real-time demand
- ▶ Improve efficiency through optimised control strategies

WHY COOLING MATTERS

This application supports productivity and operational reliability while reducing downtime and maintenance risks.

Why it matters?

This ensures reliable performance while reducing unnecessary energy use.

WHY COOLING MATTERS

Sustainable cooling is key to enabling competitive, low-impact manufacturing.
